PREFACE

25X1A

This is a [REDACTED] report. Personnel receiving this report are cautioned that a strict need-to-know principle applies.

This Mission Coverage Index (MCI) furnishes a listing of items of intelligence interest covered by aerial photographic material from Mission 3224, dated 14 May 1963. The listing provides the latest description based on photographic interpretation for each target covered by the mission except for those targets in which no significant change was observed. Items in the listing are arranged by (1) country, (2) WAC area within the country, and (3) coordinates within the WAC area reading from south to north and from west to east. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix.

For convenience of the recipient, a subject index to the intelligence targets has been included in the listing. Targets in the subject index are listed (1) by category, (2) by country within the category, and (3) alphabetically by place name within the country.

The recipient of this MCI is cautioned that the scan of photography from Mission 3224 was accomplished in a relatively short time and often without the aid of precise analytical and mensural equipment commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, additional detailed analysis may somewhat alter portions of the information.

Mission 3224 provides photographic coverage in Laos, North Vietnam, and South Vietnam.

APPENDIX
EXPLANATION OF COLUMN HEADINGS
AND PHOTO REFERENCES

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. Where appropriate, the city and installation names are followed by a capsule description.

Coordinates -- Coordinates are referenced to the SW corner of the minute square. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- This column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target number 0616-1 and an NPIC target number 0617-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

The photo reference indicates frame(s) on which the target appears and conditions which affect interpretation of the target.
